

Kapellbrücke and Wasserturm

1145 pieces · 110 different parts

A brick-built souvenir model, compatible with standard bricks.

On its display stand: 25.6 × 27.2 cm, 17 cm tall.

Parts list and BrickLink Wanted List: see the project website.

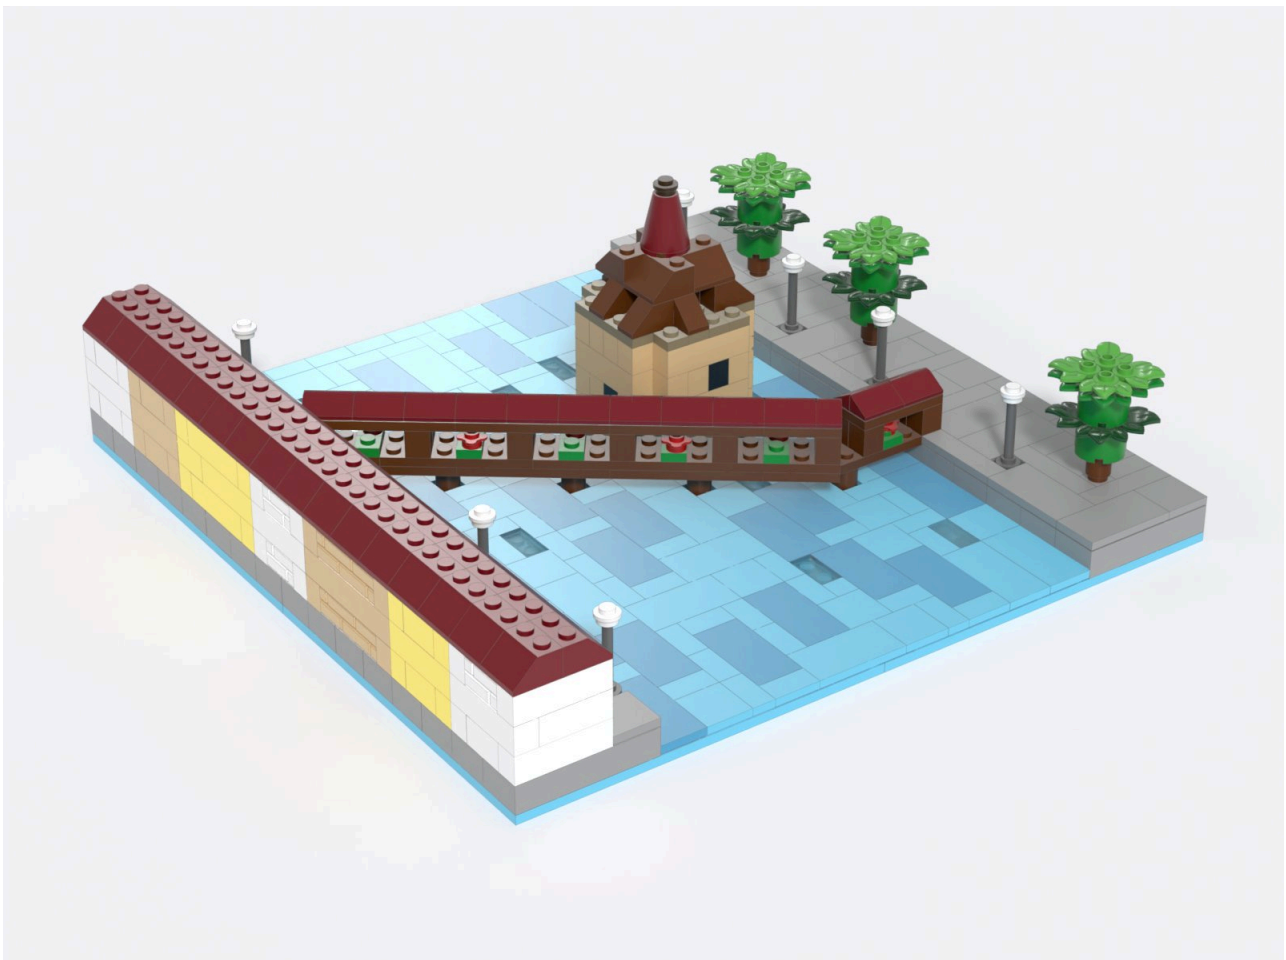

ABOUT THE LANDMARK

Kapellbrücke and Wasserturm

The Chapel Bridge is a covered wooden footbridge that crosses the river Reuss at an angle, next to the stone Water Tower. Together they are the symbol of Lucerne. It is one of the oldest covered wooden bridges in Europe, and paintings under its roof tell the story of the town.

In the middle of Lucerne's old town, where the Reuss flows out of Lake Lucerne, a few minutes' walk from the station.

Built	Water Tower about 1300; bridge about 1365
Length	about 205 m today; about 279 m at first
Water Tower	about 35 m high, eight-sided, walls up to 3 m thick
Paintings	originally 158 triangular panels, painted in the 17th century
Named after	St. Peter's Chapel at the north end of the bridge
Visitors can	walk across for free, at any time of day

Through the centuries

- 
- about 1300** ● The eight-sided Water Tower is built in the river as part of the town's defences.
 - about 1365** ● The covered bridge is built. It links the two halves of the old town and also guards the town against attack by boat from the lake.
 - 17th century** ● Hans Heinrich Wägmann paints scenes from Swiss and Lucerne history, and from the lives of the saints Leodegar and Maurice, on panels under the roof.
 - 1833 to 1898** ● The banks are filled in for new streets and quays. The bridge loses about 75 m at its south end and a little more at the north end.
 - 1892** ● Alpine swifts start nesting in the Water Tower. Storks had left their nest on its roof a few years before.
 - 1919** ● The town archive finally moves out of the tower.
 - 18 August 1993** ● A fire destroys much of the bridge and most of the paintings.
 - 14 April 1994** ● The rebuilt bridge reopens, less than eight months after the fire.

LOOK CLOSER

A tower of many jobs

Over the centuries the Water Tower has been a lookout post, a prison and torture chamber, a treasury and the town archive. Its name comes simply from standing in the water. Today it is used by a local artillery club and is not open to the public.

Fire on the river

On a summer night in 1993 the old bridge caught fire, possibly from a carelessly dropped cigarette. Many of the old paintings were lost. Look closely as you cross: in places you can still see charred remains of the old paintings.

Swifts, not storks

Look at the top of the Water Tower in summer. Fast, dark birds race around it, screaming. They are Alpine swifts, and they have nested in the tower since 1892. It is one of the largest colonies in central Switzerland.

FIND IT IN LUCERNE

Address

Kapellbrücke, 6002 Luzern

Getting there

About five minutes on foot from Lucerne station: walk towards the old town along the river.

Tip

For the classic photo, stand on the Seebrücke or the quay near the station in the early morning, when the bridge is quiet. Then cross it slowly and look up at the paintings.

The display stand

Every model in the series stands on the same black stand with a nameplate, so your souvenirs line up on the shelf. Build the black strip, press it under the front edge of the model, and press the small 2 × 4 plates (the feet) under its back corners. Then stick the label from the nameplate page on the tan tiles.

turn the model around

Your nameplate

Print this page at 100 % (no “fit to page”), cut out a label along the grey line and stick it on the tan 2 × 8 nameplate of the display stand. Tip: sticker paper or a strip of clear tape on top makes it last.

The empty stork nest

Look at the very tip of the Water Tower: a small brown nest sits on the spire.

Storks have not nested on the tower for more than a hundred years, but the nest is still there. Since 1892 the roof has housed a large colony of Alpine swifts instead.

The bridge in the model is shortened; the real one is about 200 metres long, the second-longest covered wooden bridge in Europe.
